Case Study for Allprint Supplies Ltd

The Company

Allprint are one of the UK’s leading suppliers of materials to the sign, exhibition and display market. Established in 1984 and operating from 26,000 ft² of modern premises in Slough, they provide a portfolio of thousands of products for next day delivery. They have slitting machines in-house and their own applications centre with printers and cutters.

“The Bridge will help to improve the processing time.” Robert Briggs

The Need

Allprint needed all of their products to have barcodes to improve time and accuracy restraints for progressing orders and to ensure that all products are booked in and out correctly.

- Ability to trace and track specific items.
- Procedures needed to be changed to decrease the manual workload.
- Pickers and packers wanted to know what to pick and pack without needing paper based orders.

The Solution and Result

The Bridge was introduced with the MJM Traceability and Live Link modules.

- Having Traceability gives Allprint access to the MJM traceable table, which lets the operators track all of the traceable products to see exactly when each product was booked in and out of the warehouse.
- Paper and manual work has been reduced since the Live Link module was implemented, as it automatically allows pickers and packers to see which orders on the scanner to pick and pack in real time, once these orders have been picked and packed the orders get automatically progressed to delivery, paper work produced and ready to invoice.
