Case Study
R and L Slaughter

The Company

Founded in 1956, R and L Slaughter, is a family owned business that is the major independent laboratory equipment, disposables and chemical supplier in the South-East of England.

R and L Slaughter are a major supplier to many Universities, Hospitals and Medical Schools. They have and ever growing range of products for all their customers laboratory needs.

The Need

Prior to having the Bridge installed, R and L Slaughter had no bar coding system for their stock which limited the accuracy of their stock count.

- They wished to be able to improve on the speed and accuracy of their receipt, issuing and stock count processing.
- They required to have the ability to bar code their own products as well as component stock.
- They wanted the option to be able to record stock when located in multiple bin locations in several warehouses.

The Solution

The Bridge with the Order processing and Stock modules were installed to coincide with their Symbol scanners.

- This installation aided to reduce errors and duplication of work within the warehouses.
- A reduction in labour was an option due to a notable increase in the speed of the sales, purchase and stock processing functions through the implementation of a new bar coding system.
- The system provided the adequate functionality needed to maximise the benefits of using handheld PDA devices.
