Bridge v4.39 September 2013

Bug Fixes

Bridge Standard Server

- For files that contain only one picked order users have the ability to incorporate the number of the order within the files name.

- For files that contain multiple picked orders users have the ability to record the names of the pickers within the files name.

Hand Held Device

- For orders that has been processed through online systems users have the ability to be able to track their stock.

New Features

Printing Stock Labels

- Stock labels and GRN labels can now be printed from the stock processing screen:

- Users have the ability to select an option that will allow the printing of labels without first having to open NiceLabel.

- Details that can be added to the labels from the processing screen include Stock Reference, Date and Batch Number.
